Latest treatments for heart valve problems

When Monday, March 4, from 11 a.m. until noon

Where Erie Community Center, 450 Powers Street

People with mild heart valve problems often live long, full lives and never require treatment. But once a diseased valve begins to affect your heart's ability to pump blood, you may need a valve repair or replacement.

Come hear Dr. Srinivasan, BCH's structural heart program director, describe the types of heart valve disorders and their potential complications. He'll then explain the latest treatment options for mitral and aortic valve disease, with a special focus on minimally invasive endovascular procedures such as TAVR and MitraClip® Therapy.
