FREE HEALTH LECTURE

Latest treatments for heart valve problems

When Wednesday, Feb. 12, from 10:30 a.m. to noon

Where Boulder Jewish Community Center, 6007 Oreg Avenue

Speakers

- Srini Iyengar, MD, BCH's structural heart program director and one of Colorado's most experienced TAVR specialists
- Daniel O'Hair, MD, BCH's cardiovascular surgery program chair and one of the nation's leading experts in robotic-assisted mitral valve surgery

People with mild heart valve problems often live long, full lives and never require treatment. But once a diseased valve begins to affect your heart's ability to pump blood, you may need a valve repair or replacement to prevent serious complications such as congestive heart failure, atrial fibrillation, pulmonary hypertension or even death.

Come hear heart valve disease specialists Drs. Srini Iyengar and Daniel O'Hair describe the types of heart valve disorders and their potential complications. Then learn about the latest options for repairing or replacing a problem valve, including minimally invasive TAVR, MitraClip® Therapy and robotic-assisted mitral valve surgery.

RESERVATIONS REQUIRED:
