VIRTUAL PHYSICIAN INFO SESSION

Safe, incision-free treatment for essential tremor

When Thursday, July 1, from 6 to 7 p.m.

Where Watch online. You'll get the link once you register.

MR-GUIDED FOCUSED ULTRASOUND OFFERS QUICK RELIEF WITH LOW RISK

Focused ultrasound is a safe, incisionless and minimally-invasive treatment that uses beams of acoustic energy to heat and destroy a small, targeted area of brain tissue — all without harming adjacent tissues. The focused ultrasound leads to precise destruction, thereby reducing hand tremor. When paired with MR imaging, a complete anatomical survey of the treatment area allows for patient-specific planning and real-time monitoring.

Watch neurosurgeon Kara Beasley, DO, describe this revolutionary no-incision treatment option for ET.
