Breakthroughs in detecting and treating prostate cancer

When Wednesday, Sept. 22, from 7 to 8 p.m.

Where Watch online. You'll get the link once you register.

Prostate cancer hits one in nine men living in the U.S., and is the second leading cause of cancer death among American men. Yet when caught early, survival from prostate cancer is nearly 100 percent.

Hear urologist Dr. Carolyn Fronczak discuss the latest approaches for detecting prostate cancer, including new genomic urine and blood tests and multi-parametric MRI imaging. Then get an overview of the different risk categories for prostate cancer and how those categories influence follow-up and treatment options such as minimally invasive robotic-assisted surgery.
